

PRODUCT INFORMATION

A Product of Valvoline Cummins Ltd.

Valvoline Transfluid IID

PRODUCT DESCRIPTION

Valvoline Transfluid IID is a fluid for automatic transmissions of the latest design. It has got

- Superior friction characteristics that provide controlled slip for friction components: gear changing quality demands smooth clutching action without excessive slip and free from chatter. Low co-efficient of friction is obtained by means of special additives.
- Low temperature flow properties avoids sudden overload of circuits when starting in very cold weather.
- High oxidation resistance, thermal stability and detergent properties preserve the overall performance during long periods of use thereby preventing the formation of deposits, gums and varnishes.
- Compatibility with elastomers, and doesn't affect non ferrous metals like copper or alloys.

APPLICATIONS

Valvoline Transfluid IID is recommended Automatic transmissions and hydraulic systems for which the manufacturer recommends a DEXRON IID[®] fluid:

- Automatic gearboxes.
- Couplers and Convertors.
- Power steering.

TYPICAL CHARACTERSTICS

Kinematic Viscosity @ 40°C, cSt	38.2
Kinematic Viscosity @ 100°C, cSt	7.82
Viscosity Index	181
Flash Point, COC, °C, Min.	180
Pour Point, °C, max	-39

Available Packs: 210 Ltrs.

9/2008
