Pump : Horizontal split casing pumps ranging from 50 lps to 250 lps

Engine : State of the art Cummins engine power will be used

Electrical : Motors of Siemens or ABB will be used for powering the pumps

Coupling : HOLSET Flexible Coupling

Base Frame : Customized to control vibrations for improved life of Engine & Pump

SPECIFICATIONS

SPECIAL FEATURES

Ready to use : Engine & Pump are mounted on common base frame coupled with state of the art HOLSET flexible coupling and duly tested as per the required standards

The Control panel, inbuilt Fuel Tank, Batteries (with cut out), Silencer and supports, fire extinguishers are integrated with base rail.

Robust lifting hooks along with safety ropes are provided for ease of moving the pump to location as required.

Faster D-Commissioning & Commissioning : Since the entire pump set along with all required accessories are integrated as a unit the set can be moved at will and commissioned in another location in a matter of hrs. The delay would only be in connecting the pipes to the inlet and outlet of the pump and filling diesel.

In House Testing : Although Engine & Pump is tested individually by respective manufacturer, once the pump & engine is mounted & assembled on the base rails, complete pump set along with base rail is tested for performance & vibration before it is dispatched.

Garuda Pumps can be supplied in different options as below:

- Standard Base Rail Mounted
- Standard Base Rail Mounted with roof to protect set from heat & rain
- Trolley mounted
- Set with full canopy
